

Pollen Sense™

REAL-TIME AUTOMATED POLLEN IMAGING

These are images that were automatically focused, magnified and isolated.

Presenting the first *fully-automated* device that *collects and images pollen and other airborne particulates down to less than 5µm in real-time.*

Current Features:

- Rugged and low maintenance.
- 12v DC - easy to solar power if desired.
- Images are saved to a cloud service in real-time.
- Pollen Sense caches data so internet disruptions don't compromise information.
- Raw images can be accessed in real-time for analysis or later for examination.
- Access reports to past and present data for your device.
- For researchers and forecasters, regional and national data are also available.

Under Development:

- Automated classification and identification of pollen and other particles
- Protection from extreme weather conditions is automated
- Text or email notification if a device cannot reach the internet or has gone offline
